

2026 Fetal Alcohol Spectrum Disorders (FASDs) Webinar Series

Untangling Neurodevelopmental Complexities Around FASDs

A webinar series exploring diagnosis, research, and systems-level change

Sept

3

11am-
12pm CT

Differential Diagnosis Across Trauma, FASDs, and Toxic Exposures

Children affected by fetal alcohol spectrum disorders (FASDs), trauma, and other toxic exposures often present with similar developmental, behavioral, and cognitive challenges, making accurate identification and diagnosis difficult. This webinar will explore areas of overlap and distinction among these conditions, highlighting key clinical and developmental features that can inform differential diagnosis.

Sept

18

11am-
12pm CT

Neurodevelopmental Profiles in FASD and Autism

FASDs and Autism Spectrum Disorder (ASD) share a number of neurodevelopmental and behavioral characteristics, which can create challenges for identification, diagnosis, and service planning. This webinar will explore current research on the neurobehavioral overlap between FASD and ASD, highlighting similarities and differences in neurodevelopmental profiles.

Sept

25

11am-
12pm CT

Advancing Community Screening for Prenatal Alcohol Exposure and FASDs

Communities across the country are developing innovative approaches to improve identification of prenatal alcohol exposure and FASDs. This webinar will highlight state-based initiatives in California and Maine that are working to increase FASD awareness, strengthen screening efforts, and improve support for children and families.
